## EXECUTIVE SUMMARY

This document is the accompanying report of the Deliverable 5.5, Applications software development of Work Package 5 (Post Crisis Needs Assessment Tool in regards to Construction Damage and related Needs (PCCDN)). In chapter 1, the design of the PCCDN tool is presented and the system architecture that has been adapted in order to achieve these objectives and user requirements is described. The next chapter offers a concise description of the information content of the PCCDN tool and the Data and Knowledge Bases. Finally, the generic database application that has been deployed and the interfacing of the PCCDN tool with the other WPs of RECONASS is presented. Technology selection and implementation details are given in an effort to clarify the development of the application.
